Customer_trusted

The screenshot shows the Amazon Athena Query Editor interface. On the left, the 'Tables and views' panel lists tables in the 'handson-project-database' database: accelerometer_landing, customer_landing, customer_trusted, and step_trainer_landing. The main editor displays a SQL query: `SELECT COUNT(*) FROM "handson-project-database"."customer_trusted";`. The query has been executed successfully, as indicated by the 'Completed' status bar. The 'Query results' tab shows a single result: 482. The 'Query stats' bar indicates a time in queue of 102 ms, a run time of 464 ms, and 161.06 KB of data scanned.

#	_col0
1	482

The resulting customer_trusted data has no rows where shareWithResearchAsOfDate is blank.

The screenshot shows the Amazon Athena Query Editor interface. The 'Tables and views' panel lists tables: accelerometer_landing, accelerometer_trusted, customer_curated, customer_landing, customer_trusted, ml_curated, step_trainer_landing, and step_trainer_trusted. The main editor displays a SQL query: `SELECT * FROM customer_trusted where sharewithresearchasofdate is null`. The query has been executed successfully, but the 'Query results' tab shows 'Results (0)' and 'No results'. The 'Query stats' bar indicates a time in queue of 95 ms, a run time of 713 ms, and 161.06 KB of data scanned.

Accelerometer_trusted

The screenshot shows the Amazon Athena Query Editor interface. The 'Tables and views' panel lists tables in the 'handson-project-database' database: accelerometer_landing, customer_landing, customer_trusted, and step_trainer_landing. The main editor displays a SQL query: `SELECT COUNT(*) FROM "handson-project-database"."accelerometer_trusted";`. The query has been executed successfully, as indicated by the 'Completed' status bar. The 'Query results' tab shows a single result: 40981. The 'Query stats' bar indicates a time in queue of 98 ms, a run time of 734 ms, and 3.30 MB of data scanned.

#	_col0
1	40981

Step_trainer_trusted

The screenshot shows the Amazon Athena Query Editor interface. On the left, the 'Tables and views' sidebar lists four tables: 'accelerometer_landing', 'customer_landing', 'customer_trusted', and 'step_trainer_landing'. The main editor area contains the SQL query: `SELECT COUNT(*) FROM "handson-project-database"."step_trainer_trusted";`. Below the query, the 'Query results' tab is active, showing a green 'Completed' status bar with the following metrics: Time in queue: 121 ms, Run time: 673 ms, and Data scanned: 1.59 MB. The results table has one column, '_col0', and one row with the value 14460. Buttons for 'Run again', 'Explain', 'Cancel', 'Clear', and 'Create' are visible above the results. A 'Reuse query results' toggle is also present.

Customer_curated

The screenshot shows the Amazon Athena Query Editor interface. On the left, the 'Tables and views' sidebar lists four tables: 'accelerometer_landing', 'customer_landing', 'customer_trusted', and 'step_trainer_landing'. The main editor area contains the SQL query: `SELECT COUNT(*) FROM "handson-project-database"."customer_curated";`. Below the query, the 'Query results' tab is active, showing a green 'Completed' status bar with the following metrics: Time in queue: 101 ms, Run time: 625 ms, and Data scanned: 161.03 KB. The results table has one column, '_col0', and one row with the value 482. Buttons for 'Run again', 'Explain', 'Cancel', 'Clear', and 'Create' are visible above the results. A 'Reuse query results' toggle is also present.

#	_col0
1	482

ML_curated

The screenshot shows the AWS Glue console interface. On the left, the 'Tables and views' section lists several tables, including 'ml_curated'. The main area displays a SQL query: `SELECT COUNT(*) FROM "handson-project-database"."ml_curated";`. The query has been executed successfully, as indicated by the 'Completed' status. The results show a single row with the value 43681. The console also displays query statistics: Time in queue: 104 ms, Run time: 769 ms, and Data scanned: 5.84 MB.

Glue Job Python code shows that the option to dynamically infer and update schema is enabled.

The screenshot shows the AWS Glue console interface for a job named 'project-job5'. The 'Visual' tab is selected, showing a data target node labeled 'Data target - S3 bucket ML_CURATED'. The 'Data preview' tab is also visible, showing a message: 'Target node not supported. You have selected a data target node which is not supported for data preview. Please select another type of node instead.' The right sidebar contains configuration options for the job, including 'S3 Target Location' (s3://handson-project-1/curated/ml_c) and 'Data Catalog update options' (Create a table in the Data Catalog and on subsequent runs, update the schema and add new partitions).

S3 bucket

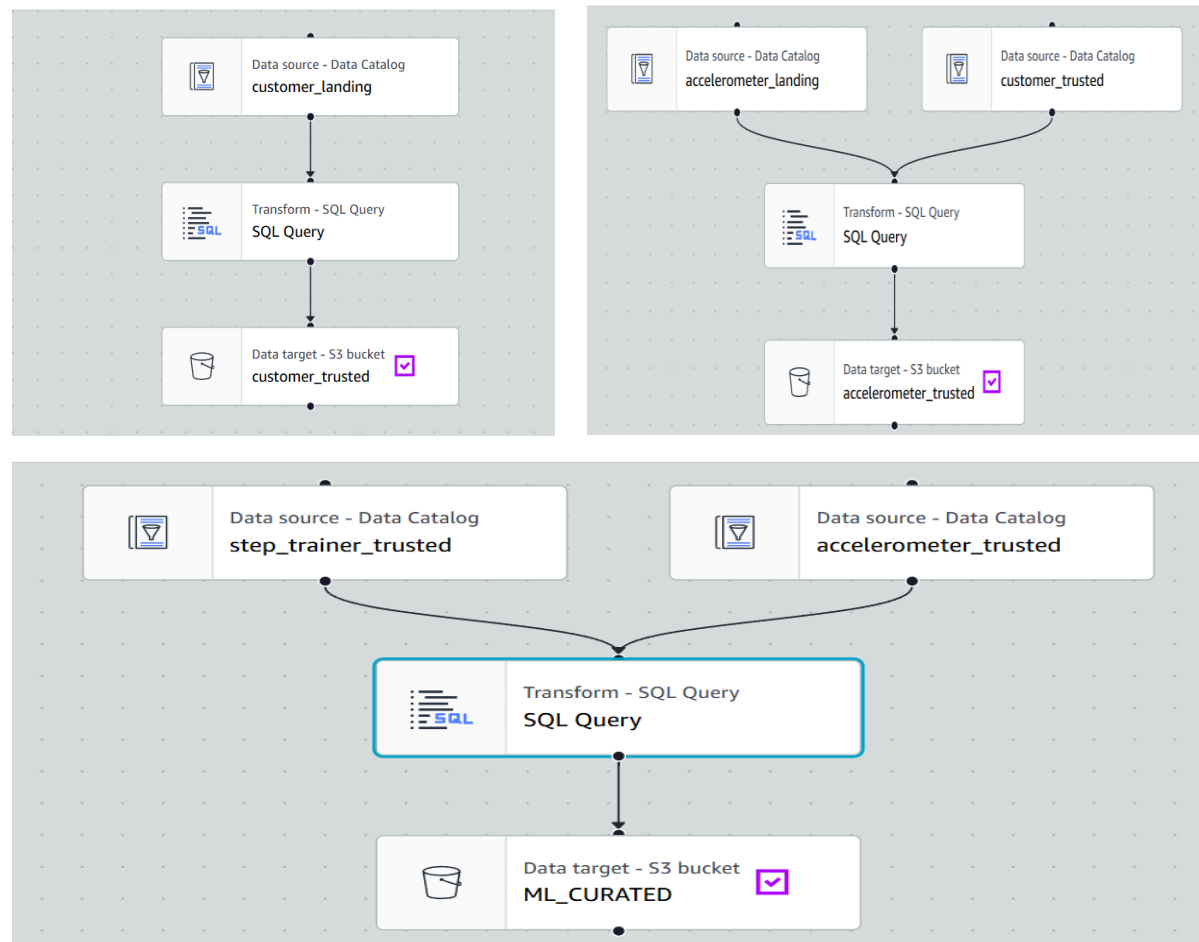

The screenshot shows the Amazon S3 console interface for the 'handson-project-1' bucket. The 'Objects' tab is selected, showing a list of objects. The objects are listed in a table with columns: Name, Type, Last modified, Size, and Storage class. The objects listed are 'athena-result/', 'curated/', 'landing/', and 'trusted/', all of which are folders. The console also displays a search bar and various action buttons like 'Copy S3 URI', 'Copy URL', 'Download', 'Open', 'Delete', 'Actions', 'Create folder', and 'Upload'.
